Job Description

We are looking for a motivated, full-time, in-house junior developer to join our team. You should be comfortable working with a wide variety of technologies such as WordPress, JavaScript, Python, and SQL. This individual will be a high-level web technologist with strong all-around technical skills. As a rapidly growing company, your creative ideas and execution of responsibilities are crucial to our successful trajectory. Our team is composed of scientists and analytical thinkers; we believe that a scientific approach and objective openness to problem solving are fundamental.

Requirements

- BS in CS, IT, or related field preferred, minimal a 4-year degree with related experience

Skills and Responsibilities

- Maintain, support, and enhance existing public web applications
- Author and deploy dynamic reports for web and print
- Serve as help-desk for on-premise and remote staff
- Effectively communicate technical solutions and recommendations
- Build and maintain API endpoints
- Create and maintain ETL processes to accommodate changes in business requirements
- Write beautiful, well rounded documentation that accompanies your code
- Able to balance the demands of product managers and clients while still meeting deadlines; can prioritize and communicate accordingly
- Accuracy with time estimations of deliverables; highly capable of planning in both the short and long-term.
- Follow best practices and standards
